No. D/1625 OF 1918.

OFFICE OF THE SURGEON GENERAL
WITH THE GOVERNMENT OF BOMBAY:

Poona, 25th June 1918.

From

THE HONOURABLE SURGEON-GENERAL R. W. S. LYONS, M.D., K.H.P., I.M.S.,
Surgeon General with the Government of Bombay;

To

THE SECRETARY TO GOVERNMENT,
General Department, Bombay.

Sir,

I have the honour to submit, for the information of Government, the Triennial Report on the Asylums for the treatment of Insanes in the Bombay Presidency for the years 1915—1917. It is to be regretted that the improvements of lunatic asylums in India has not kept pace with the improvement which has taken place in our hospitals generally. But the fact remains that while hospitals are designed, staffed and equipped suitably for the treatment of medical and surgical cases on the lines of western medical science, our asylums are much behind in these respects. In England insanes are treated in "Mental Hospitals" in which their mental diseases receive as careful individual attention as cases of bodily illness receive in general hospitals, while in India our lunatic asylums are little more than their name indicates, refuges for insanes, where they are prevented from harming themselves or others and receive such care and treatment as is possible. The designation "lunatic asylum" is a bad one and should be replaced by that of "hospital for mental diseases" as in England. If this were done it would keep more prominently in view the nature of these institutions and the object which they are meant to achieve. It will be seen from the statistics of the three years under review that there is a considerable and steady increase in the number of patients admitted. This is due to many causes, but principally to economic stress which renders the public less tolerant of wandering or uncared for insanes and prevents friends and relatives devoting to them the time and attention possible when the cost of living was cheaper and the conditions of life less exacting. It is partly due also to the fact that the public are beginning to recognise the advantages of giving these cases the benefit of treatment at an earlier period of the disease than formerly. They know that the sooner a case of bodily disease comes under hospital treatment the better, and they rightly argue that this applies also in the case of mental diseases. Consequently patients are sent to asylums earlier and recoveries are quicker and more frequent. The increase which has occurred in the total population of the asylums of the Bombay Presidency during the past three years is 22 per cent. above that of the previous triennium and has led to over-crowding of all the asylums in the Presidency and, as time goes on, a very much larger asylum population must be expected until the greater portion of the insanes in the Presidency are accommodated. At present there is only room for 1,224 insanes in our asylums while the estimated insane population of the Presidency at the last census was 6,270. This figure must be much below the real number, owing to the fact that the enumerators were laymen, who only entered as insane those who were evidently "mad," the early cases of mental instability and quiet cases passing unnoticed. It will be seen that only about one-fifth of the estimated insane population are under treatment and that probably one-sixth would be more nearly the correct figure. It may reasonably be anticipated that as years pass a progressively large population of these mental cases will be admitted for treatment, and to meet the present needs and provide for this anticipated increase, a very considerable increase in the asylum accommodation is necessary. When the extensions of the asylums are being built, to meet the ever-growing requirements, they should include the provision of quarters for "voluntary boarders" who come for seclusion and rest, and provide sections where the different classes of patients could be suitably kept in comfort and with less prison-like surroundings than present arrangements permit. In short, they should provide a number of wards comparable to a general hospital's wards but suitable for mental cases. The attendants should be men and women nurses specially trained in the care of insanes. At present our asylums are far behind our hospitals in this respect, but it is hoped that wealthy and benevolent donors who do so much toward providing trained nurses in our hospitals and maternities will also assist in providing attendants trained in caring for the mentally sick.

Buildings and Repairs.

2. During the triennium under review, owing to the financial situation created by the war, most of the works of importance, including the increased accommodation required in the Ahmedabad, Dhárwár and Ratnágiri Asylums, sanctioned in Government Order, General Deparement, No. 7377, dated 23rd September 1915, had to be postponed. In consequence only the following absolutely necessary minor additions and alterations were made.

3. At the Naupáda Asylum a room was added to the kitchen to serve as a scullery. Expanded metal fan-lights were placed above the doors of the lunatic cells to improve ventilation and dust-bins were provided for the servants' lines. A block for 32 non-criminal male insanes—part of the accommodation for 99 insanes, sanctioned in Government Resolution, Public Works Department, No. C.W.—2179, dated 6th November

1911—was nearly completed and two day sheds for male patients and trellis work round the bathing platforms in the female wards are under construction.

4. At Ratnágiri a masonry tank with a water-pipe connection was provided in the male criminal yard.

5. At Yeravda a work shed was converted into a work room for carpentry and a block in the Female Section was converted into a "Matron and Nurses' Room". Another block of this section was turned into a quarter for a European insane and a stand-pipe for drinking water was provided in the Indian Male Section.

6. At Dhárwár the male day barracks were paved with artificial stone and sun-shades added to some of the windows in the female barracks.

7. At Ahmedabad the sills of doors of the male and female wards were removed to enable the wards to be washed out and the old padded cell which was never used was dismantled and taken into ordinary use.

8. In the Hyderabad Asylum the new boundary wall was completed in 1915.

9. The annual repairs to the asylum buildings have been regularly carried out and they are in good order.

10. The new Central Asylum at Yeravda as mentioned in the report of 1912—1914 still remains uncompleted and stands in urgent need of the following additions :—

(1) Provision of padded and strong rooms.
(2) New criminal section.
(3) Bath houses.
(4) Additional quarters for staff.
(5) Provision of accommodation for insane lepers.
(6) Laboratory.
(7) The provision of wards of one bed each in hospital.
(8) Railing to separate sections.

I consider that these additions are essential for the efficient working of the asylum and should be undertaken as soon as possible as the usefulness of the asylum is crippled by their absence and the staff quarters are crowded beyond the limits of reasonable privacy.

11. Owing to the large increase in the number of insanes admitted, the several asylums have been overcrowded. The proposals submitted for increasing the existing accommodation at the lunatic asylums at Yeravda, Dhárwár, Ahmedabad, Ratnágiri and Hyderabad, referred to in my last triennial report, which have received the administrative approval of Government in 1915, will no longer be sufficient and in addition considerable extensions at the Central Asylum, Yeravda, and at Ahmedabad will be necessary to meet the requirements of the next few years. These extensions should be planned to meet the requirements referred to at the beginning of this report and considerably (20 per cent.) in excess of the present asylum population. Funds have been allotted for the additional accommodation required at Naupáda and Ratnágiri Asylums, and plans and estimates for the extension of the accommodation sanctioned at the other asylums are under preparation.

Water-supply.

12. The supply has been sufficient and good at all the asylums with the exception of Naupáda. The proposal to provide a piped supply at this asylum from the Tansa main has been approved and plans and estimate for laying a cast iron pipe from the main to the asylum have been sanctioned. The scheme for supplying river water for gardening and flushing purposes at the Yeravda Asylum has not been carried out yet owing to the financial stringency caused by the war. This, however, is a productive work which would pay for its cost in increased garden produce and at the same time provide a most beneficial form of employment, bodily and mental, for the insanes.

STATEMENT NO. I.

Total population.

13. The total number of insanes admitted and re-admitted into the asylums during the year 1917 was 541 males and 92 females as compared with 569 males and 99 females in 1916 and 420 males and 79 females in 1915. On an average 510 males and 87 females were admitted annually during the three years 1915—1917 against 355 males and 76 females in 1912—1914—an average increase of 35·3 per cent. or double the number of admissions (17·6 per cent.) in the previous triennium. From what has been already pointed out this state of things must be expected to continue until a large proportion of the total insane population of the Presidency is under treatment.

14. The total population of the asylums including those remaining from the previous year and admitted during the year 1917 was 1,947 against 1,900 in 1916 and 1,652 in 1915. The mean annual population for the triennium was 1,474 males and 359 females, showing an increase of 277 males and 62 females (23·1 per cent. and 20·9 per cent.) over the previous triennium 1912—1914. The average number discharged was 428 annually against 376 in 1912 to 1914—an increase of 11·2 per cent. There was overcrowding to the extent of 14·78 per cent. The average European population rose from 59 in 1912—1914 to 95 in 1915—1917—an increase of 61·0 per cent. due to the increased number of British military insanes admitted. The increase took place mainly in 1917 when 70 cases were admitted owing to military insanes being sent to India from Mesopotamia, etc., instead of going direct to England.

Daily average strength.

15. The daily average strength in 1917 was 1,335·2 as compared with 1,294·6 in 1916 and 1,194·0 in 1915. The mean daily average strength for the three years 1915—1917 was 1,274·6 against 1,088·8 for 1912—1914.

Discharges and cures.

16. Of the total treated, an average of 257 males and 23 females were cured during the triennium as compared with 140 males and 22 females in 1912—1914. The average number of cures for 1915—1917 was 25·9 males and 9·8 females against 15·3 males and 9·2 females for 1912—1914.

17. Of the insanes returned as "transferred to friends" the average number shown as "improved" for 1915—1917 was 92 and "not improved" was 32 against 73 and 28 for 1912—1914. The large proportion of "improved" to "cured" discharges at the Central Lunatic Asylum Yeravda, in 1917 was due to the greatly increased admission rate of British military insanes during that year. A very large number of these cases improved rapidly after admission and spent a comparatively short time in the asylum before being sent to England.

Sickness.

18. The daily average number of sick treated in hospital in 1917 was 45·5 against 35·3 in 1916 and 39·5 in 1915, the mean for the triennium being 40·1 against 40·8 of the previous triennium. The percentage of sickness to the daily average strength was 3·3 against 2·7 in 1916 or the same as in the year 1915, the average for the triennium being 3·1 against 3·4 for 1912—1914. The general health of the insanes was fairly good.

Mortality.

19. The number of deaths rose from 85 in 1915 to 106 in 1916 and to 135 in 1917. In spite of the increased population of the asylums, however, the mortality was low as compared with the previous triennium, the average mortality for 1915—1917 being 109 against 119 for 1912—1914. The ratio per cent. of deaths to the daily average strength was 10·1 as compared with 8·2 in 1916 and 7·1 in 1915. The mean death rate on the daily average strength during the years 1915—1917 was 8·5 against 10·1 in 1912—1914, a very satisfactory improvement.

20. The following table shows the ratio per cent of death to the daily average strength at the several asylums during the two triennial periods :—

	1915.			1916.			1917.			Mean of 1915—1917.			Mean of 1912—1914.		
	Males.	Females.	Total	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
Naupáda, Thána ...	3·8	9·5	4·8	7·9	13·0	8·9	13·6	10·5	13·0	8·4	7·7	8·9	16·4	25·0	18·5
Ratnágiri ...	5·0	3·1	4·6	3·0	11·8	4·8	11·5	...	8·9	6·5	5·0	6·1	5·7	7·3	6·1
Central Lunatic Asylum, Yeravda. Europeans.	8·9	5·3	7·3	7·4	5·6	6·7	3·5	15·7	8·4	6·6	8·9	7·5	14·1	...	10·8
Central Lunatic Asylum, Yeravda. Indians ...	8·4	3·2	6·9	6·3	4·8	5·9	3·7	6·3	4·5	6·1	4·8	5·8	10·2	3·1	8·3
Dhárwár ...	8·3	...	6·1	9·5	...	7·4	8·7	9·2	8·9	8·8	3·1	7·5	6·9	18·1	10·0
Ahmedabad ...	9·4	17·9	10·9	6·1	...	5·0	19·3	2·7	15·8	11·6	6·9	10·6	6·0	4·4	5·7
Hyderabad ...	9·4	18·1	10·3	18·4	31·1	9·6	14·8	19·6	15·4	14·2	22·9	15·1	9·6	12·3	9·8

21. The death rate at Naupáda, Yeravda and Dhárwár was lower than during the previous triennium. The numbers were the same at Ratnágiri for the two triennial periods. The death rate at Naupáda shows a marked decrease. In 1909—1911 it was 27·4 and had caused much concern. But the sanitary measures subsequently adopted at the commencement of the rains resulted in an appreciable reduction and in 1912—1914 the rate was 18·5; in 1915—1917 it was further reduced to 8·9. The average number of deaths among the European inmates of the Yeravda Asylum was 3 in an average population of 95·0 against 4 in an average population of 36·9 in 1912—1914. The high death rate at Ahmedabad was due to the fact that a considerable number of deaths occurred among patients who were in very bad health when admitted. Of these, 6 died within 7 days to 1 month and 4 within 1 month and 20 days to 3 months and 20 days. Of the 18 cases remaining, 6 died of ankylostoma duodenale, 5 from tubercle and 7 from dysentery and diarrhœa. The high death rate in the asylum at Hyderabad, Sind, was due to the severe epidemics of malaria which prevailed all over Sind during the three years under review. The malarial cachexia which results is often fatal in persons already weakened by insanity. The chief causes of death at the several asylums taken together were dysentery, diarrhœa and tuberculosis. It may be pointed out in this connection that it has been noticed for some time past that the present practice of transferring insanes under police escort is very undesirable. Police constables are not accustomed to deal with insanes and cannot attend properly to their nourishment and general management while in transit. Consequently it not infrequently happens that insanes arrive at asylums in a very dirty and exhausted state. Insanes should be removed to asylums by trained asylum warders only, and proposals for carrying this out have been submitted to Government.

Statement No. II.

Criminal lunatics.

22. The total number of criminal insanes confined in the asylums in the year 1917 was 243, of whom 230 were males and 13 females as compared with 223 males and 17 females in 1916 and 207 males and 17 females in 1915. The average population for the triennium was 220 males and 16 females against 208 males and 15 females in 1912—1914. The daily average strength was 182·2 against 186·6 in 1916 and 172·3 in 1915, the mean for the triennium being 180·4 against 171·6 for the three years 1912—1914, an increase of 5·9 per cent.

Statement No. III.

Religion, sex and residence of the insanes admitted.

23. Of the total admissions, including re-admissions, there were :—

	1915.	1916.	1917.	Average.	
				1915—1917.	1912—1914.
Hindus	263	333	329	308	234
Mahomedans	145	215	160	140	115
Europeans and Eurasians	33	53	93	60	33
Indian Christians	26	38	31	32	24
Other caste	23	27	18	23	25
Total ...	490	666	631	563	461

The noticeable increase in the figures for Europeans and Hindus was due to the large admissions of British soldiers (100) and military sepoys and followers (151) into the asylums at Yeravda and Naupáda, respectively, during the years 1916 and 1917.

Statement No. IV.

Previous occupation of the insanes admitted.

24. Military employees including sepoys, follower's etc., numbering 224 furnished the largest number of admissions during the triennium under review. These were followed by labourers (132), cultivators (110), British soldiers (108), domestic servants (104), merchants and traders (101), clerks (78) and mendicants and vagrants (69).

Statement No. V.

Ages of insanes admitted.

25. The admissions and re-admissions according to age were as follows :—

	1915.	1916.	1917.	Average.	
				1915—1917.	1912—1914.
Under 20 ...	32	36	34	34	31
Between 20 and 40 ...	384	501	449	461	337
Do. 40 and 60 ...	70	126	96	91	91
Upwards of 60 ...	4	3	2	3	3

Statement No. VI.

Types of insanity.

26. The various types of insanity treated during the three years 1915—1917 as compared with the mean of the preceding three years 1912—1914 and the results attained are summarized in the subjoined table :—

	Total treated.					Recovered.				
	1915.	1916.	1917.	Mean of 1915—1917.	Mean of 1912—1914.	1915.	1916.	1917.	Mean of 1915—1917.	Mean of 1912—1914.

All other forms ...	...	...	...	...	...	...	...	...	...	...	...	...	...	...	...

* Cases of insanity due to all forms of Indian hemp are included under this head.

Statement No. VII.

Ætiological factors and associated conditions in the insanes admitted.

27. The principal predisposing and exciting causes were mental stress giving rise to 134 cases against 167 in 1916 and, 83 in 1915 and the abuse of intoxicants 89 cases against 93 and 88, toxic diseases 26 against 33 and 24, mental instability 55 against 61 and 64, physiological defects 18 against 24 and 25, traumatic causes 7 against 24 and 4. The causes of insanity were not ascertained in 258 cases owing to the previous history given being unobtainable.

Statement No. VIII.

Cash accounts.

28. The receipts from paying patients amounted to Rs. 70,338-3-3 as compared with Rs. 66,309-15-0 in 1916 and Rs. 36,762-5-2 in 1915, the average receipts for the triennium being Rs. 57,803-7-10 against Rs. 29,815-1-11 in 1912—1914. The large average increase under this head is mainly attributable to the recovery of charges for insanes from the municipalities or relatives of insanes concerned, under the recent orders of Government. The value of stores received from the manufacturing department, less cost of raw materials, increased from Rs. 5,409-9-10 in 1915 to Rs. 6,750-1-10 in 1916 and Rs. 6,932-5-0 in 1917, the average value for the past three years amounting to Rs. 6,364-0-3 against Rs. 4,369-5-11 for 1912—1914.

29. The total expenditure amounted to Rs, 4,05,578-1-6 against Rs. 3,89,740-9-6 expended in 1916 and Rs. 3,38,924-2-9 in 1915. Deducting the receipts from paying patients, the value of stores received from the manufacturing department and the amounts realised on account of the sale of goods to the public, etc., the net expenditure was Rs. 2,40,975-5-4 as compared with Rs. 2,33,343-3-6 in 1916 and Rs. 2,42,132-12-3 in 1915. Excluding the Public Works Department charges, the net expenditure for the triennium under review, as compared with the mean of the preceding triennium, was:—

		Rs.	a.	p.
1915		2,07,284	15	2
1916		1,99,226	13	7
1917		2,11,865	9	10
Average.	1915—1917	2,06,065	12	10
	1912—1914	1,88,981	5	11

30. The net cost per head of daily average strength was Rs. 180-7-7 against Rs. 180-3-10 in 1916 and Rs. 202-12-7 in 1915, the mean for the triennium being Rs. 187-13-0 as compared with Rs. 173-3-11 in the previous three years. The increase in the cost per patient was due to higher prices under the heads of diet, bedding and clothing.

Amusements.

31. For the amusement of insanes Rs. 1,905-6-0 were spent as compared with Rs. 3,137-15-5 expended in 1916 and Rs. 2,815-9-0 in 1915. The average expenditure under this head for the two triennial periods 1912—1914 and 1915—1917 was Rs. 2,132-9-9 and Rs. 2,619-10-2, respectively.

STATEMENT No. X.

Receipts and expenditure on account of manufacture.

32. The total credits of the Manufacturing Department amounted to Rs. 12,282-13-9 and debits to Rs. 4,213-6-4, showing a profit of Rs. 8,069-7-5 in 1917 as compared with Rs. 8,130-1-7 in 1916 and Rs. 6,928-11-2 in 1915. The mean profit for the triennium was Rs. 7,709-6-9 against Rs. 5,198-13-3 for 1912—1914.

33. Insanes who are capable of working in the asylum factories are employed on weaving and cane work and others are employed in gardening, the manufacture of clothing and in performing domestic duties connected with the asylums. When a supply of water for gardening is provided at Yeravda Asylum beneficial employment will be found for many inmates for whom no suitable work is available at present and profits under this head will be materially increased. The average number of insanes employed on the manufactures during the triennium was 419·9 against 347·1 for 1912—1914.

Visitors.

34. The official visitors were regular in their attendance at all the asylums.

Management.

35. The general management of the asylums has been satisfactory notwithstanding the changes of *personnel* caused by the recall of officers to military duty and their replacement by Superintendents who were new to the work. In the case of Yeravda and Naupáda asylums the work was rendered especially difficult owing to the number of military cases which they were called upon to admit. Fortunately, it was possible to arrange for the early transfer of most of the European insanes to England and of the Indian soldiers of other provinces of India to the asylums of those provinces. The work was carried out at a great disadvantage owing to the crowded condition of all the asylums, on account of half the European overseers joining the army and their places being taken by untrained hands, and because of the difficulties experienced in obtaining and keeping suitable asylum warders and sweepers on account of the higher pay offered for service in Mesopotamia and East Africa. The difficulty in obtaining and keeping sweepers has become a serious one owing to better paid employment, as fitters and mechanics for which they have been found specially suited, being open to them. While it will be impossible to do entirely without sweepers, in future, everything will have to be done to reduce the number required to a minimum by means of a water carriage system of sewage in all asylums and hospitals and of suitable arrangements to wash out cells and wards by means of hoses. Yeravda Asylum is at present the only one which has a water carriage sewage system, but no time should be lost in introducing this in all the other asylums (and in Civil Hospitals), where hand removal of excreta is at present employed. During the triennium under review the warder staff at the Naupáda, Ratnágiri and Hyderabad Asylums was strengthened to cope with the additional work entailed by the increased admissions, and, with a view to retain trained and experienced warders, it was endeavoured to give suitable promotion by revising the grades of pay at these and other asylums. Still, owing to the increase in the cost of living a suitable class of male and female warders cannot be obtained and kept and a considerable further increase of pay will be necessary. Sweepers are almost impossible to obtain even at an increase of 50 per cent. on the present rates.

36. As this is the last report I shall make on the lunatic asylums of this Presidency, I wish to thank the Superintendents and staffs of all the asylums for the whole-hearted way in which they have carried out their duties under most trying conditions during the last three years. The asylums have all been overcrowded during the whole period and have had a constant stream of insanes from overseas and from India passing through them. But notwithstanding these adverse conditions no outbreak of infectious disease has occurred in any asylum and the sickness and mortality rates have been on the whole low. The heaviest portion of the work fell on Major Shaw, Superintendent of the Central Lunatic Asylum, Yeravda, and Ráo Bahádur Mody, Superintendent of Naupáda Asylum, Thána, owing to the large number of military insanes admitted into these asylums. Both these officers were working short-handed as regards their staffs, and Major Shaw was all the time doing military or prison duty in addition to his duties as Superintendent.

I have the honour to be,

Sir,

Your most obedient servant,

R. W. S. LYONS, M.D.,

Surgeon-General, I. M. S.,

Surgeon-General with the Government of Bombay.

STATEMENT No. I.

Showing the Admissions, Discharges, etc., etc., of Lunatics in the Lunatic Asylums of the Bombay Presidency during the year 1917 and provincial totals for two previous years.

The capacity of the Narotamdas Madhavdas Lunatic Asylum, Naupáda, is, at 140 superficial feet per paying patient, and at 80 superficial feet per pauper patient, for 198 males and 42 females; the maximum number of lunatics confined on any one night was 249 males and 60 females.

The capacity of the Ratnágiri Lunatic Asylum is, at 50 superficial feet per patient, for 125 males and 33 females; the maximum number of lunatics confined on any one night was 144 males and 43 females.

The capacity of the Central Lunatic Asylum, Yerávda, is, at 110 superficial feet per patient for 112 Europeans—77 males and 35 females and for 274 Indians—199 males and 75 females; the maximum number of European lunatics confined on any one night was 38 males and 20 females and that of Indian lunatics was 273 males and 114 females.

The capacity of the Dhárwár Lunatic Asylum is, at 80 superficial feet per patient, for 78 males and 30 females; the maximum number of lunatics confined on any one night was 98 males and 39 females.

The capacity of the Ahmedabad Lunatic Asylum is, at 64 superficial feet per patient, for 125 males and 31 females, the maximum number of lunatics confined on any one night was 157 males and 41 females.

The capacity of the Hyderabad Lunatic Asylum is, at 74 and 70 superficial feet per patient, for 159 males and 17 females respectively the maximum number of lunatics confined on any one night was 136 males and 16 females.

* 27 transferred to other Asylums and one escaped.

† 3 transferred from the criminal to non-criminal list and one transferred to another Asylum.

‡ Escaped.

‖ Transferred to another Asylum.

NOTE.—The figures shown in the statement include 2 cases under observation at the Central Lunatic Asylum, Yeravda.
